KurzbeschreibungThe Helicopter Pilot's Companion is essential reading for those who are considering training to be a helicopter pilot, those currently undertaking training and those who have recently gained their Private Pilot's Licence for helicopters. Written in a clear, no-nonsense style, it covers a whole range of subjects concerning rotary aviation including common myths about flying helicopters, choosing a flying school and an instructor, the basics of rotary aerodynamics, and all practical aspects of learning to fly helicopters. Issues are examined that are important when the new helicopter pilot has gained his, or her, licence and is able to fly alone, including flying with passengers, coping with challenging weather and dealing with emergencies. In addition, the author provides useful advice to those readers who are considering becoming professional helicopter pilots. Illustrated with 28 colour
