Von C.W. Griffin, Richard Fricklas : Manual of Low-Slope Roof Systems: Fourth Edition (P/L Custom Scoring Survey) before purchasing it in order to gage whether or not it would be worth my time, and all praised Manual of Low-Slope Roof Systems: Fourth Edition (P/L Custom Scoring Survey):

KundenrezensionenHilfreichste Kundenrezensionen0 von 0 Kunden fanden die folgende Rezension hilfreich. Help for building owners, consultants and architects...Von Nathan Rainey HighIn the opening chapters the authors identify many roofing industry problems... insufficient owner budgets, over-reliance on warranties, insufficient work inspection, poor design and construction, and lack of maintenance.Building owners, roofing designers, architects - the types of readers most likely to have an interest in this book - will know the problems first hand. And will appreciate the wealth of information presented. This text:Identifies and discusses in depth the myriad causes of roof failure;

Presents roof design principles in light of current research; Reviews factors that influence roof design; Review the various (generic) roof systems in depth; And offers guidance for specifying and inspecting roofing work. The writing style is clear and concise, supported with graphs, current survey information, and other technical data. Readers will be armed with enough information to sort through the information and misinformation published by roof system manufacturers, select the best roof systems for their roof conditions and budgets, develop sound designs, and plow through most procurement and construction obstacles. Highly recommended.

Kurzbeschreibung For decades, this manual has been the most widely respected guide to designing, constructing, and maintaining low-slope roofing systems. Kurzbeschreibung For decades, this manual has been the most widely respected guide to designing, constructing, and maintaining low-slope roofing systems. Synopsis This edition has been updated to provide information on pertinent changes in applicable building codes, including recommendations stemming from Hurricane Andrew. It covers all major types of flat, multi-ply, built-up roofing systems that are typically used on commercial and industrial facilities.
