KurzbeschreibungA look at the emotional side of medicinethe shame, fear, anger, anxiety, empathy, and even love that affect patient carePhysicians are assumed to beobjective, rational beings, easily able to detach as they guide patients and families through some of lifes most challenging moments. But doctors emotional responses to the life-and-death dramas of everyday practicehave a profound impact on medical care. And while much has been written about the minds and methods of the medical professionals who save our lives, precious little has been said about their emotions. In *What Doctors Feel*, Dr. Danielle Ofri has taken on the task of dissecting the hidden emotional responses of doctors, and how these directly influencepatients. How do the stresses of medical lifefrom paperwork to grueling hours to lawsuits to facing deathaffect the medical care that doctors can offer their patients? Digging deep into the lives of doctors, Ofri examines the daunting range of emotionsshame, anger, empathy, frustration, hope, pride, occasionally despair, and sometimes even lovethat permeate the contemporary doctor-patient connection. Drawing on scientific studies, including some surprising research, Dr. Danielle Ofri offers up an unflinching look at the impact of emotions on health care. With her renowned eye for dramatic detail, Dr. Ofri takes us into the swirling heart of patient care, telling stories of caregivers caught up and occasionally torn down by the whirlwind life of doctoring. She admits to the humiliation of an error that nearly killed one of her patients and her forever fear of making another. She mourns when a beloved patient is denied a heart transplant. She tells the riveting stories of an intern traumatized when she is forced to let a newborndie in her arms, and of a doctor whose daily glass of wine to handle the frustrations of the ER escalates into a destructive addiction. But doctors dont only feel fear, grief, and frustration. Ofri also reveals that doctors tell bad jokes about toxic sock syndrome, cope throughgallows humor, find hope in impossible situations, and surrender to ecstatic happiness when they triumph over illness. The stories here reveal the undeniable truth that emotions have a distinct effect on how doctors care for their patients. For both clinicians and patients, understanding what doctors feel can make all the difference in giving and getting the best medical care.PressestimmenTaut, vivid prose. . . . She writes for a lay audience with a practiced hand. *New York Times*"Here is a book that is at once sad and joyful, frightening and thought-provoking. In her lucid and passionate explanations of the important role that emotions play in the practice of medicine and in healing and health, Danielle Ofri tells stories of great importance to both doctors and patients. Perri Klass, author of *Treatment Kind and Fair: Letters to a Young Doctor*An invaluable guide for doctors and patients on how to recognize and navigate the emotional subtexts of the doctor-patient relationship. *Kirkus* sYet her insightful and invigorating book makes the case that its better for patients if a physicians emotional compass-needle points in a positive direction. *Booklist*(starred review)Rich and deeply insightful. . . . A fascinating journey into the heart and mind of a physician struggling to do the best for her patients while navigating an imperfect health care system. *Boston Globe* With grace, courage, humility, and compassion, Bellevue Hospital physician Ofri gives voice and color to the heartbreak, stress, and joy that attends medical practice. *Library Journal* A fabulous read. *Greater Good*"Dr. Ofri's book is essential reading in Medical Humanities. She traces her own experiences with patients from all backgrounds, and uses clinical vignettes to confess her own feelings--disgust, fear, shame, gratitude, joy. She weaves together personal anecdotes and medical learning in a compelling account of her medical decisions and reflections. Highly recommended."Sara van den Berg, Professor of English and Medical Humanities, Saint Louis University"I have been a family physician for almost 50 years, and despite all those years of medicine, I was in tears about half the time while I read *What Doctors Feel*. I have recommended that every AHMA member read it."Bill Manahan, Executive Director at Minnesota Holistic Medicine Group"Dr. Ofri's anecdotal writing style makes this book a perfect accompaniment for the academic setting. Her real-life experiences can be incorporated into a variety of health science curricula bringing course theory together with practical application. As a result, her readers critical gain insight regarding why applying theory in the practice of medicine requires empathy for the physicians and proactive cooperation amongst colleagues."Christine Whittrock, Associate Professor of Instruction in Regulatory Affairs, Temple University "I describe patients to my students and ask them to role play either the doctor or the patient. I see a difference in their responses after they have read *What Doctors Feel*. They are more studied in their answers. Part of medical education now is not only core competencies from a factual standpoint but also a social standpoint. Dr. Ofri has a way of communicating those lessons in a clear a cogent and very personal fashion."Beth Dollinger M.D. Arnot Ogden Medical Center*What Doctors Feel* is the perfect book for my research and teaching on the subject of lack of

empathy in medical school students. James Asa Shield, Jr., MD, Professor, Chairman, Department of Psychiatry, Virginia Commonwealth University I certainly know your work in fact, not only do I have copies of each of your books, but I often use your writing in my teaching at UNM medical school. I teach communication skills, ethics/professionalism, narrative medicine, and wellness, all under my role as Director of Physician and Student Wellness at the School of Medicine. I think the piece of yours I last used was *When Doctors Listen* from the New York Times, and I just assigned *What Doctors Feel* in a course related to the Healers Art curriculum. Liz Lawrence, MD, FACP, Director, Physician and Student Wellness, Associate Professor, Department of Internal Medicine, UNM School of Medicine
